

Photography

We provide a wide range of high quality, cost-effective photography services. Most companies do not have the time or talent to produce their own high images for their websites or print catalogs. We can do photo shoots on-site or at our studio. We use high end digital single lens reflex cameras, in order to achieve the best image quality, at the highest megapixels possible.

Our expertise includes, but is not limited to:

- industrial equipment photography
- architectural photography
- studio tabletop photography
- corporate portraits
- slides
- prints
- digital imaging

We can serve all your photography needs. Our studio is equipped with backdrops, professional lighting, and a light stand specially designed for photographing small items without a distracting background, great for eye-popping product shots.

Capture and Conversion

With our flatbed scanner, we have the capabilities to capture digital images from:

- prints
- documents
- film
- transparencies
- slides

A quality initial scan makes a quality final image for use in print media and catalogs. It can then be downsized for low-resolution web imaging.

We can save to all popular web and press image formats - GIF, JPG, PNG, TIFF, Illustrator EPS, and more. However, this capability alone is not enough. Knowledge of which file format is more appropriate for the given type of image content will result in better looking, and faster-downloading images.

We know the techniques for taking high-resolution, press-ready images from your commercial printer, and transform them into crisp, sharp looking, tightly compressed web images. We balance the appearance degradation due to compression with the faster downloading, the smaller file sizes allowing for great looking, snappy web pages.

We know many methods and techniques for making your images look better. From color correction to full image manipulation, our experts can handle it all. This means that filling out that lopsided tree next to your entryway, removing those distracting corners of signs and boxes in your shop floor photos, and making product jump out of the picture, away from the background is no problem for us.

Are you a photographer and need a place to host your images?

The same qualities that make us an ideal solution for streaming video and audio; high bandwidth and fast, large disk drives - all backed by experts in the field; make us an excellent choice for all your photography serving needs.

If you are a professional or amateur photographer looking to store photos, have an online image gallery, or sell your photos online in various resolutions, Videocracy has the tools and knowledge to get the job done. We have the bandwidth, storage, data integrity, security and e-commerce packages to offer exactly what you need.

Whether you are a professional photographer or contract (purchase) high-resolution images, Videocracy has the tools and knowledge to get the job done. We have the bandwidth, storage, data integrity, and security to offer exactly what you need.

Our servers are optimized for storage and high bandwidth, exactly what you need for high-resolution pictures and streaming media.

You have the option of hosting with us for part or all of your website. Hosting just the images on a subdomain on our servers will allow you to monitor the access and usage independently of the rest of your site.
